EXPERIENCE

ElasticRun, Pune — *Software Engineer*

August 2019 - PRESENT

ElasticRun is an E-Commerce company.

- Developed various full-stack projects according to the business needs.
- Optimized Backend API and Frontend for already existing projects.
- Improved the user experience which dropped the number of support tickets for the project by more than 90%.
- Redesigned the workflow for various ERP processes which helped the Business/HR/Legal team.

Tech Stack: Frappe(Python Framework), Flask, Javascript, Angular 9, React.

PROJECTS

Facility Management —

- Applying workflow on the document based on its current state so the ground, business, legal and account team can take part accordingly using frappe workflow.
- Notification and validation are added on each step based on user role permission using Jinja 3 and Angular 9 reactive form.
- Created various APIs so our frontend application can communicate with the backend.
- Various other modules such as purchase invoice, GL are integrated with this application using REST API and hooks provided by frappe.
- Various reports were created based on business needs using python script and SQL.

Tech Stack: Angular 9, Node, Frappe, REST API

SKILLS

Languages: Python, Javascript, Typescript

Libraries & Frameworks: Node, Frappe, Flask

Database: MariaDB, MySQL, NoSQL

JS Frameworks: ReactJS, Angular 9, Express.Js

Open Source: Firebase, Frappe, Docker

EDUCATION

IACSD, Pune —
PG Diploma in Advanced Computing
FEBRUARY 2019 - JUNE 2019

Pesto Tech —
Engineering Fellow
June 2021 - August 2021

Incident Management —

- Any Company employee can raise an incident request if anything happens at the facilities owned by the company so the legal team can minimize the losses accordingly.
- Workflow and notification are also added based on the user roles and permission using the frappe framework and React js.
- Integration with Facility Management is done using REST API.

Tech Stack: Reactjs, Frappe, MySQL, REST API

Naukri RMS Integration—

- Naukri RMS is used by the HR team for recruiting but the job offer is being created using the internal system of our company using Naukri API's we had to integrate it to our system.
- The ETL process was done using the Node REST API.

Tech Stack: REST API, Python, Node

Critica - Book Recommendation/Review App—

[Project](#) | [Github](#)

- Critica is a book recommendation and review application that helps users to choose the next book for reading.
- Created backend with JWT auth, Notification, Stripe Integration, and Firestore.

Tech Stack: REST API, Node, Firebase, React
